GENERAL DISCLOSURES

The views expressed in this material are those of Campbell and are subject to change at any time based on market or other conditions. These views are not intended to be a forecast of future events, or investment advice. Investors are cautioned to consider the investment objectives, risks, and charges of products before investing.

This information is provided for informational purposes only and does not constitute an offer or solicitation, and should not be construed as such. The offering of shares in the Fund can only be made by the offering memorandum (the "OM"), which contains important information regarding the material terms and risk associated with an investment in the Fund. The OM contains information regarding the terms, fees, risks, and other factors and should be read in its entirety and retained by anyone considering an investment in the Fund.

Managed futures employ leverage; they are speculative investments that are subject to a significant amount of market risk, have substantial charges, and are suitable only for the investment of the risk capital portion of an investor's portfolio. Managed Futures are not appropriate for all investors. Although adding managed futures to a portfolio may provide diversification, managed futures are not a perfect hedging mechanism; there is no guarantee that managed futures will appreciate during periods of inflation or stock and bond market declines. There is no guarantee that managed futures products will outperform any other asset class during any particular time. Diversification does not ensure a profit or protect against a loss. In addition, in periods of extreme economic or geopolitical instability, market and/or regulatory forces may make it difficult to enter or exit positions, which may cause a modification in trading decisions.

PERFORMANCE DISCLOSURES

PAST PERFORMANCE IS NOT INDICATIVE OF FUTURE RESULTS.

The information contained in this material was prepared by Campbell & Company, may be estimated and has not been audited. The current month's performance numbers are estimates; therefore all performance numbers in this material containing the current month's performance number are estimates.

Campbell Managed Futures Onshore Fund – Series B – The funds traded in this Series are proprietary, as the Series is offered exclusively to Campbell & Company, LP, its employees and its affiliates. Series B does not charge a management or performance fee. The performance shown is actual performance since inception of the Series and is shown net of expenses, including brokerage commissions and trading fees estimated at 0.60%, operating expenses estimated at 0.12% and cash management fee estimated at 0.075% of funds managed by the cash manager. Unless otherwise noted, the returns shown are total returns, which include any earnings on cash or investment gains. *Effective June 30, 2016, the Campbell Financial Futures Fund renamed to the Campbell Managed Futures Onshore Fund.

GLOSSARY

Value-at-Risk (VaR): Value-at-Risk (VaR) expresses market risk as a percentage of a portfolio's value. Normally, VaR is measured over a specific time horizon and at a specific confidence level. Campbell & Company produces a daily VaR using a quarterly look back at a 97.5% confidence level, which represents approximately 2 standard deviations using a standard normal distribution. This allows us to make the statement that we have 97.5% confidence that our daily loss will not exceed the VaR percentage of a portfolio's value. This means that we would expect daily losses to exceed our VaR metric approximately 2.5% of the time.
