Objective

The Fund Seeks to provide total return for investors retiring approximately at or near the year 2040.

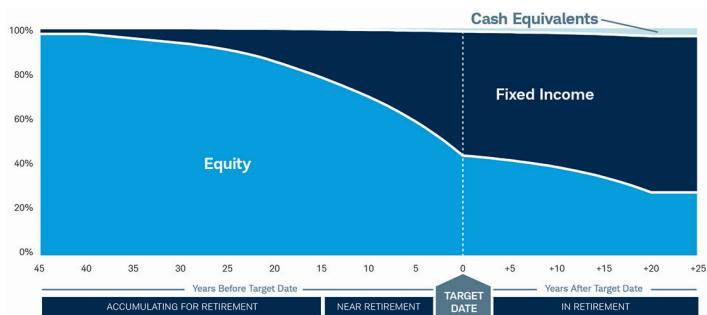

Fund Strategy

To pursue its investment objective, the Fund is designed as a single investment portfolio that adjusts asset allocation over time to better match the anticipated changing risk tolerances and return objectives of investors over their expected investment horizon. The Fund may diversify holdings by investing in assets across a variety of asset classes, including, but not limited to, U.S. equity, international equity, emerging markets equity, global real estate, short-term bond, intermediate-term bond, inflation-protected bond (U.S. TIPS), global bond, and cash equivalents. The Fund uses a blend of actively and passively managed sub-advised and proprietary strategies to gain exposure to various market capitalizations and asset classes. The SMRT/SIRT 2040 Composite Index is a blend of broad based market indices used to measure the Fund’s performance.

In addition to age and anticipated retirement date, investors should consider their risk tolerance, personal circumstances and complete financial situation prior to investing in a particular target date fund. The principal value of the Fund is not guaranteed at any time, will continue to fluctuate up to and after the target date, and may not provide adequate retirement income.

Glide Path

With the goal of becoming more conservative over time, the Fund is reallocated annually to reduce equity and increase fixed income and cash equivalents allocations. The starting allocation of 97% equity (including global real estate), 2.5% fixed income, and 0.5% cash equivalents changes over time until it reaches 44% equity, 54% fixed income and 2% cash equivalents at the 2040 target date. The Fund will continue to reduce its allocation to equity investments for an additional 20 years, reaching its most conservative policy allocation of 28% equity, 68% fixed income and 4% cash equivalents in 2060. At this point, the allocation is intended to remain static. In 2040, it is assumed that investors will no longer contribute assets to the Fund and, dependent upon each individual’s financial circumstances, will begin to gradually withdraw assets invested in the Fund over time.

The values of the target funds will fluctuate up to and after the target dates. There is no guarantee the funds will provide adequate income at or through retirement.

Diversification and asset allocation strategies do not ensure a profit and cannot protect against losses in a declining market. The Funds are subject to market volatility and risks associated with the underlying investments. Risks include exposure to international and emerging markets, small company and sector equity securities, and fixed income securities subject to changes in inflation, interest rates, market valuations, liquidity, prepayments, and early redemption. The Funds are built for investors who expect to start gradual withdrawals of Fund assets on the target date, to begin covering expenses in retirement.
